ABSTRACT

This guide provides information for planning and calculating quantities of food to be purchased and used by schools serving Type A lunches in the National School Lunch Program. This edition includes changes resulting from new developments in food production and processing as well as changes in marketing procedures, packages, and quality of foods available today. Use and careful application of the information will help to ensure economical menu planning and food purchasing, and adequate amounts of various foods to prepare Type A lunches for the number of children to be served. The foods are listed in the following sections--bread, butter, milk; meat and meat alternates; vegetables and fruits; and other foods. The information is presented in tabular form for easy reference. The six columns contain information on food as purchased, purchase unit, servings per purchase unit, serving size or portion, purchase units for 100 servings, and additional yield information. (Author/IRT)

 * Documents acquired by ERIC include many informal unpublished *
 * materials not available from other sources. ERIC makes every effort *
 * to obtain the best copy available. Nevertheless, items of marginal *
 * reproducibility are often encountered and this affects the quality *
 * of the microfiche and hardcopy reproductions ERIC makes available *

FOOD BUYING GUIDE FOR TYPE A SCHOOL LUNCHES

This Food Buying Guide provides information for planning and calculating quantities of food to be purchased and used by schools serving Type A lunches in the National School Lunch Program.

This edition of the Food Buying Guide includes changes resulting from new developments in food production and processing as well as changes in marketing procedures, packaging, and quality of foods available today. The recommendations are based on yield data obtained from many food service units, food processors, and research laboratories. Yields of edible food vary with the quality and condition of the food purchased. Yields of foods also are influenced by care in storage of food, by kind of equipment used in preparation, by the cooking method, and the form of the food to be served. The number of servings used in this publication are average figures based on yields from good quality foods prepared by methods that result in a minimum of waste.

Use and careful application of the information in this buying guide by school lunch personnel and purchasing agents will help to insure:

- Economical menu planning and food purchasing.
- Adequate amounts of various foods to prepare Type A lunches for the number of children to be served.

EXPLANATION OF TABLES

Foods in this guide are classified according to the Type A lunch pattern of the National School Lunch Program (see page 2). In addition, there is a section on Other Foods used in the preparation of lunches.

The foods are listed in the following sections:

- Bread, Butter, Milk
- Meat and Meat Alternate
- Vegetables, Fruits
- Other Foods

The information in the Food Buying Guide is presented in tabular form for easy reference. The columns are identified by numbers from 1 through 6, as follows:

COLUMN 1—FOOD AS PURCHASED: Within each of the four major sections listed above, the individual foods are arranged in alphabetical order. The foods are listed according to the forms in which they are obtained on the market—fresh, canned, frozen, or dehydrated. These foods are further described as sliced, shelled, or without bone, to indicate preparation that is done by the food processor.

COLUMN 2—PURCHASE UNIT: The unit of purchase specified for most foods in this guide is one pound. In addition, the purchase units for many processed foods include an institutional pack and the net weight of its contents. Data on the one-pound unit of purchase can be used to determine number of servings for any other size purchase unit on the market.

COLUMN 3—SERVINGS PER PURCHASE UNIT: This column shows the number of servings or portions of a given size from each purchase unit. Numbers are reported in two decimals because they are used to calculate the number of servings from other purchase units on the market, and also to calculate the amount of food needed for large numbers of servings. It is because of the use of these figures, and not because the figures represent this degree of accuracy, that they have been reported to the nearest 0.01 of a serving for less than 10 servings per

purchase unit. See page 8 for instructions on using data in column 3.

COLUMN 4—SERVING SIZE OR PORTION: The size of a serving or portion is given as a weight, measure, or number of pieces or slices. For such items as a raw apple or a piece of cooked chicken, the approximate yield in measure or weight is given in parentheses. The serving size given in this column for foods specified in the Type A lunch pattern will either meet the Type A lunch requirement or can be credited toward it. Most of the fruits and vegetables include 1/2 cup and 1/4 cup servings to help meet the nutritional needs of children in different age groups. The portion of some foods in the guide is determined by their use in lunches or in recipes.

COLUMN 5—PURCHASE UNITS FOR 100 SERVINGS: This column shows the number of purchase units needed for 100 servings or portions. The purchase unit listed in column 2 and the serving size (by weight) listed in column 4 were used to calculate the number of purchase units in column 5. The numbers in this column are reported in two decimals to assure enough food for 100 servings. Less than 1 purchase unit is reported in 2 decimals and more than 1 purchase unit is raised to the nearest 0.05. See page 8 "How to Calculate the Quantity of Food Needed" (Method 1) for instructions on using data in column 5 for other than 100 servings.

COLUMN 6—ADDITIONAL YIELD INFORMATION: In this column other information is given to help the food manager calculate the amount of food needed to prepare school lunches. For many foods, the quantity of ready-to-cook or cooked food obtained from a pound of food as purchased is shown. The weight or number of cups of drained fruit or vegetable from a No. 10 can is also given for many processed foods. See page 7, "How to Use Additional Yield Information in Column 6" for instructions on calculating the quantity of food to purchase to provide the amount of ready-to-cook food called for in a recipe.

THE TYPE A LUNCH PATTERN

THE TYPE A LUNCH PATTERN is a guide to well-balanced lunches. It is designed as an aid in planning lunches that will help meet the child's nutritional needs. To meet the requirements of the National School Lunch Program, the Type A lunch must contain as a minimum:

MEAT OR MEAT ALTERNATE

- 2 ounces (edible portion as served) of lean meat, poultry, or fish; or
- 2 ounces of cheese; or
- 1 egg and a half portion of meat or other meat alternate; or
- 1/2 cup of cooked dry beans or peas; or
- 4 tablespoons of peanut butter; or
- An equivalent quantity of any combination of the above listed foods.

To be counted in meeting this requirement, these foods must be served in a main dish or in a main dish and one other menu item.

VEGETABLES AND FRUITS

A 3/4-cup serving consisting of 2 or more vegetables or fruits or both, in raw or cooked form. A serving (1/4 cup or more) of full-strength vegetable or fruit juice may be counted to meet not more than 1/4 cup of this requirement.

BREAD

- 1 slice of whole-grain or enriched bread; or
- 1 serving of other bread such as cornbread, biscuits, rolls, muffins, made of whole-grain or enriched meal or flour.

BUTTER OR FORTIFIED MARGARINE

- 1 teaspoon of butter or fortified margarine.

This food may be used as a spread on bread, as a seasoning, or in the preparation of other foods in the lunch.

WHOLE MILK

- 1/2 pint fluid whole milk served as a beverage.

The kinds and amounts of foods listed above are approximate amounts of foods to serve to 10- to 12-year-old boys and girls. When these foods are used in the amounts specified and in combination with OTHER FOODS needed to satisfy the appetite, the lunches will make a significant contribution toward the daily dietary allowances recommended by the National Research Council for 10- to 12-year-old boys and girls.

Since younger children are not always able to eat the full Type A lunch, the regulations permit serving these children lesser amounts of selected foods than are specified above.

To meet the nutritional needs of teenagers, the regulations endorse encouraging the serving to older boys and girls of larger amounts of selected foods than are specified in the Type A lunch requirements.

See the Type A School Lunch Guide to the Amounts of Food for Boys and Girls of Specified Ages on page 3.

THE TYPE A SCHOOL LUNCH GUIDE TO THE AMOUNTS OF FOOD FOR BOYS AND GIRLS OF SPECIFIED AGES

Pattern	Pre-school children (3 up to 6 years)	Elementary school children		Secondary schools girls and boys (12 up to 18 years) ^{*1}
		6 up to 10 years	10 up to 12 years	
Meat and/or alternate: One of the following or combinations to give equivalent quantities:				
Meat, poultry, fish	1-1/2 ounces	2 ounces	2 ounces	3 ounces
Cheese	1-1/2 ounces	2 ounces	2 ounces	3 ounces
Egg ²	1	1	1	1
Cooked-dry beans or peas	1/4 cup	1/3 cup	1/2 cup	3/4 to 1-1/4 cups
Peanut butter	2 tablespoons	3 tablespoons	4 tablespoons	4 to 5 tablespoons
Vegetable and/or fruit ³	1/2 cup	3/4 cup	3/4 cup	1 to 1-1/2 cups
Bread ⁴	1/2 slice	1 slice	1 slice	1 to 3 slices
Butter or fortified margarine	1/2 teaspoon	1 teaspoon	1 teaspoon	1 to 2 teaspoons
Milk	3/4 cup ⁵	1/2 pint	1/2 pint	1/2 pint

¹ When a range in amounts is given, the smaller amounts are suggested for girls and the larger amounts for older boys. An amount midway between the amounts shown is suggested for younger boys.

² When egg is served as the main dish in the lunch, use in addition a half portion of meat or other meat alternate for all children except those 3 up to 6 years.

³ Must include at least two kinds.

⁴ Or a serving of cornbread, biscuits, rolls, muffins, etc., made of whole-grain or enriched meal or flour.

⁵ If this is impractical, serve 1/2 pint.

***NOTE:** These portion sizes also serve as a guide for the amounts of foods to serve older boys and girls (12 and over) in the Special Food Service Program.

ABBREVIATIONS

AP	as purchased
EP	edible portion
Cyl	cylinder
pkg	package
tsp	teaspoon
Tbsp	tablespoon
lb	pound
pt	pint
qt	quart
gal	gallon
oz	ounce
fl oz	fluid ounce
No.	number
wt	weight
incl.	including
excl.	excluding

EQUIVALENT COMMON FOOD MEASURES

1 tablespoon	3 teaspoons
1/8 cup	2 tablespoons or 1 fluid ounce
1/4 cup	4 tablespoons
1/3 cup	5-1/3 tablespoons
1/2 cup	8 tablespoons
2/3 cup	10-2/3 tablespoons
3/4 cup	12 tablespoons
1 cup	16 tablespoons
1/2 pint	1 cup or 8 fluid ounces
1 pint	2 cups
1 quart	2 pints
1 gallon	4 quarts
1 peck	8 quarts or 2 gallons
1 bushel	4 pecks
1 pound	16 ounces

MEASURES FOR PORTION CONTROL

Scoops or dippers, ladles, and serving spoons of standard sizes are dependable measures available for serving food quickly.

SCOOPS OR DIPPERS

The number of the scoop indicates number of scoopfuls to make 1 quart. The following table shows the level measure of each scoop or dipper in cups or tablespoons:

Scoop or dipper No.	Level measure
6	2/3 cup
8	1/2 cup
10	2/5 cup
12	1/3 cup
16	1/4 cup
20	3-1/5 tablespoons
24	2-2/3 tablespoons
30	2-1/5 tablespoons
40	1-3/5 tablespoons

Scoops or dippers may be used for portioning such foods as drop cookies, muffins, meat patties, and some vegetables and salads.

LADLES

Ladles may be used to serve soups, stews, creamed dishes, sauces, gravies, and other similar products.

The following sizes of ladles are most frequently used for serving school lunches.

1/4 cup
1/2 cup
3/4 cup
1 cup

SERVING SPOONS

A serving spoon (solid or perforated) may be used instead of a scoop. Since these spoons are not identified by number, measure or weigh the quantity of food from various sizes of spoons used in order to obtain the approximate serving size desired (USDA Recipe Card File, PA-631).

DECIMAL EQUIVALENTS IN PARTS OF ONE POUND, ONE CUP, OR ONE GALLON FOR DIFFERENT UNITS

Number of units (ounces, tablespoons, or cups) ¹	+0 unit	+1/4 unit	+1/3 unit	+1/2 unit	+2/3 unit	+3/4 unit
Decimal equivalent of one pound, one cup, or one gallon						
0		0.016	0.021	0.031	0.042	0.047
1	0.062	.078	.083	.094	.104	.109
2	.125	.141	.146	.156	.167	.172
3	.188	.203	.208	.219	.229	.234
4	.250	.266	.271	.281	.292	.297
5	.312	.328	.333	.344	.354	.359
6	.375	.391	.396	.406	.417	.422
7	.438	.453	.458	.469	.479	.484
8	.500	.516	.521	.531	.542	.547
9	.562	.578	.583	.594	.604	.609
10	.625	.641	.646	.656	.667	.672
11	.688	.703	.708	.719	.729	.734
12	.750	.766	.771	.781	.792	.797
13	.812	.828	.833	.844	.854	.859
14	.875	.891	.896	.906	.917	.922
15	.938	.953	.958	.969	.979	.984

¹ The units are read at the side and top of the table. If the units are ounces, the decimal equivalents given in the body of the table are parts of one pound. If the units are tablespoons, the decimal equivalents are parts of one cup. If the units are cups, the decimal equivalents are parts of one gallon.

EXAMPLES OF USES:

Ounces to pounds.—To convert 10-1/2 ounces to the corresponding decimal equivalent of a pound, find 10 in the first column. Follow this line across to the column headed "+1/2 unit" which shows that 0.656 pound corresponds to 10-1/2 ounces.

Pounds to ounces.—To convert the decimal 0.531 pound to ounces, find 0.531 in the body of the table. Then, in the first column find the number which is on the same horizontal line, i.e., 8. Next, add the number from the heading of the column in which 0.531 was found, i.e., 1/2. Thus, 0.531 pound corresponds to 8-1/2 ounces.

Number of servings for different size cans.—To determine number of servings for can sizes not shown in this guide, use the net weight of the contents of the can as given on the label. If the net weight of a No. 2-1/2 can of apples is 1 lb 10 oz, find 10 in the first column of the table. Opposite 10 and under column heading "+0 unit" is 0.625. Therefore, 1 lb 10 oz = 1.625 lb. This number, 1.625, multiplied by 4.22 (number of 1/2-cup servings per pound of canned apples, page 39) = 6.86, number of 1/2-cup servings from a No. 2-1/2 can of apples.

COMMON CAN AND JAR SIZES

Can size (industry term)	Average net weight or fluid measure per can (see note)	Average cups per can	Cans per case	Principal products
No. 10	6 lb 3 oz (99 oz) to 7 lb 5 oz (117 oz)	Number 12 to 13	6	Institution size—fruits, vegetables, and some other foods.
No. 3 Cyl	51 oz (3 lb 3 oz) or 46 fl oz (1 qt 14 fl oz)	5-3/4	12	Institution size—condensed soups, some vegetables, and meat and poultry products. Economy family size—fruit and vegetable juices.
No. 2-1/2	27 oz (1 lb 11 oz) to 29 oz (1 lb 13 oz)	3-1/2	24	Family size—fruits, some vegetables.
No. 2 Cyl	24 fl oz	3	24	Family size—juices, soups.
No. 2	20 oz (1 lb 4 oz) or 18 fl oz (1 pt 2 fl oz)	2-1/2	24	Family size—juices, ready-to-serve soups, and some fruits.
No. 303	16 oz (1 lb) to 17 oz (1 lb 1 oz)		24 or 36	Small cans—fruits and vegetables, some meat and poultry products, and ready-to-serve soups.
No. 300	14 oz to 16 oz (1 lb)	1-3/4	24	Small cans—some fruits and meat products.
No. 2 (vacuum)	12 oz	1-1/2	24	Principally for vacuum pack corn.
No. 1 (Picnic)	10-1/2 to 12 oz	1-1/4	48	Small cans—condensed soups, some fruits, vegetables, meat, and fish.
8 oz	8 oz	1	48 or 72	Small cans—ready-to-serve soups, fruits, vegetables.

NOTE: The net weight on can or jar labels differs among foods due to different densities of foods. For example: A No. 10 can contains 6 lb 3 oz sauerkraut or 7 lb 5 oz cranberry sauce. Meats, fish, and shellfish are known and sold by weight of contents of can.

GUIDE FOR SUBSTITUTING SMALLER CANS FOR NO. 10 CAN

Can size	Average net weight or fluid measure per can	Approximate number of cans to use in place of No. 10 can
No. 3 Cyl	46 fl oz or 51 oz	2.1
No. 2-1/2	27 oz to 29 oz	3.7
No. 2 Cyl	24 fl oz	4.2
No. 2	18 fl oz or 20 oz	5.3
No. 303	16 oz to 17 oz	6.5

HOW TO USE ADDITIONAL YIELD INFORMATION IN COLUMN 6

The yield information in column 6 may be used to determine the quantity of food required for a specified amount of ready-to-cook or cooked food listed in a recipe.

For example, a recipe for Baked Sweetpotatoes and Apples for 100 servings calls for 4 pounds of raw, sliced, pared apples. To determine the quantity of fresh apples needed, proceed as follows:

- Refer to yield information on fresh apples (page 39, column 6) which shows that 1 lb AP = 0.76 lb ready-to-cook pared apples.
- Divide the number of pounds (4) of raw, sliced apples listed in recipe by the quantity of ready-to-cook apples obtained from 1 lb as purchased, or 0.76 lb:
$$4.00 \text{ lb} \div 0.76 \text{ lb} = 5.26 \text{ pounds or } 5.30 \text{ pounds.}$$
- Thus, about 5 pounds 5 ounces of fresh apples of good quality are needed to prepare Baked Sweetpotatoes and Apples for 100 servings.

HOW TO MAKE COST COMPARISONS

The food manager can compare the cost per serving for food purchased in different market forms by using the numbers in column 5.

To calculate the cost of a serving, find the number of purchase units for 100 servings in column 5, divide by 100 by moving the decimal two places to the left, and multiply this number by the cost of one purchase unit, as follows:

$$\frac{\text{Purchase units for 100 servings}}{\text{Divided by 100}} \times \text{Cost of purchase unit} = \text{Cost per serving}$$

Calculate the cost per serving of each market form being considered for purchase and compare them. For example, to determine whether ham with bone or ham without bone is the better buy, consider the cost per serving of each:

Food as purchased	Cost per pound	Number of purchase units to serve 100	Purchase units divided by 100 times the cost per pound	Cost per serving
Ham with bone	\$0.72	18.70	$0.1870 \times \$0.72$	\$0.14
Ham without bone	1.15	16.30	$.1630 \times 1.15$.19

Thus, the food cost per serving (2 ounces cooked lean meat) is 5 cents less when ham with bone rather than ham without bone is purchased.

HOW TO CALCULATE QUANTITY OF FOOD NEEDED

METHOD 1. (Use column 5)

The purchase units for 100 servings in column 5 may be used to determine the amount needed to prepare a specified number of servings of a given size.

Assume that beef patties (2 ounces cooked meat) will be served to 325 children. To determine the quantity of ground beef needed, proceed as follows:

- Refer to yield information on GROUND BEEF, Market style (page 16, column 5), which shows that 17.20 pounds are needed for 100 2-ounce servings of cooked meat.
- Multiply the number of servings needed (325) by the number of pounds (17.20) of ground beef needed for 100 servings. Divide the answer by 100 by moving the decimal two places to the left.

$$325 \times 17.20 \text{ pounds} = 5590.00$$

$$5590 \div 100 = 55.90 \text{ or about } 56 \text{ pounds}$$

or

As a shortcut, move the decimal in column 5 two places to the left and multiply this number by the number of servings needed (.1720 pounds \times 325 = 55.90 or about 56 pounds).

METHOD 2. (Use column 3)

The number of servings per purchase unit in column 3 may also be used to determine the amount of food needed for a specified number of servings.

Assume that beef patties (2 ounces cooked meat) will be served to 325 children. To determine the quantity of ground beef needed, proceed as follows:

- Refer to yield information on GROUND BEEF, Market style (page 16, column 3), which shows that 5.84 2-ounce servings of cooked meat can be obtained from one pound of ground beef.
- Divide the number of servings needed (325) by the number of servings obtained from one pound (5.84):

$$325 \div 5.84 = 55.65 \text{ or about } 56 \text{ pounds}$$

Thus, by either method of calculation about 56 pounds of ground beef of good quality is needed to provide 325 servings of beef patties.

Bread • Butter • Milk

CONTENTS

Bread, Rolls	11
Butter, Margarine	12
Milk	12

BREAD, BUTTER, MILK

This section includes yield information on three components of the Type A lunch—Bread, Butter or Fortified Margarine, and Fluid Whole Milk.

The data on BREADS includes yield information on common types of bakery breads that can be purchased sliced on the market. The size and shape of loaves and the thickness and number of slices per loaf will vary among bakers and localities.

Hand-made, hand-shaped breads such as the French and Vienna varieties differ greatly in length and width; therefore, the average number of slices per loaf could not be determined. A serving of such breads should be comparable in amount to regular sliced bread.

All breads—commercially baked and school-baked breads such as cornbread, biscuits, rolls, muffins—must be made of whole-grain or enriched flour or meal to meet the bread requirement of the Type A lunch (page 2).

BUTTER or FORTIFIED MARGARINE may be used as a spread on bread, as a seasoning, or in preparation of other foods in the lunch. One teaspoon of butter or fortified margarine meets the requirement of the Type A lunch.

One-half pint FLUID WHOLE MILK must be served as a beverage to meet the requirement of the Type A lunch.

BREAD, BUTTER, MILK

Food as purchased (1)	Purchase unit (2)	Servings per purchase unit (3)	Serving size or portion (4)	Purchase units for: 100 servings (5)	Additional yield information (6)
BREAD, ROLLS					
BREADS					
Raisin	1-lb loaf	16	1 slice	6.25	
	2-lb loaf	34	1 slice	2.94

MEAT AND MEAT ALTERNATES

The foods in this section have been listed alphabetically according to the meat and meat alternate foods specified in the Type A lunch pattern. These foods include meats, poultry, fish, cheese, dry beans and peas, eggs, and peanut butter.

Information on Meats and Meat Alternates in this Guide Includes:

- Yield information on servings of fresh and frozen frying chickens, frozen cubed steaks, and frozen portions of fish. The cooked meat yield of the serving is given in parentheses.
- Yield information on USDA-donated foods such as canned and frozen meats not normally available on the market. These foods are listed as Special purchase. See definition below.
- Yields of commercially prepared combination foods—including canned and frozen meat and poultry products which will provide at least one ounce of cooked meat or poultry per average size serving, canned bean soup which contains 1/2 cup beans per cup of soup, and canned pea soup which contains 1/4 cup peas per cup of soup.

Servings of Cooked Meat and Poultry

- A serving of cooked meat includes the lean meat with a small amount of edible fat as normally served.
- A serving of cooked chicken or turkey includes meat and skin as normally served unless otherwise indicated.

Commercially Prepared Combination Foods—The yields for commercially prepared combination foods listed under chicken food products, meat food products, and turkey food products are based on the minimum meat and poultry requirements for food products that are packed for interstate shipment under Federal Meat and Poultry Inspection.

Yields for Cured Ham and for Breaded Fish Portions—The yield for cured ham applies to both fully cooked cured ham and cured hams to be cooked, since research findings show no significant differences in the yields. The yields are the same for both raw and fried breaded portions or sticks, as purchased on the market, because "fried breaded fish portions or sticks" are only browned, not cooked.

Factors That Influence Yields of Meat and Poultry—Yields of cooked meat and poultry will vary with type, age, fatness, and weight of animal, and the method, time, and temperature of cooking. The quantities of food listed are based on average yields of cooked meat and poultry.

Special Purchase and Market Style or Pack in Column 1 Are Defined as:

- **Special purchase**—applies only to USDA-donated foods that are not normally available on the market.
- **Market style or market pack**—refers to foods available on the market, but the term is used only when necessary to distinguish special purchase foods from regular market foods.

VEGETABLES AND FRUITS

About 100 different vegetables and fruits—in fresh, canned, frozen, and dehydrated form—are listed alphabetically in this section. Canned and frozen juices and canned soups are listed at the end of the section.

Vegetable and Fruit Information in this Guide Includes:

- Yield information on common institution size packs and a one-pound unit of many canned and frozen vegetables and fruits on the market.
- Yields in terms of 1/2 and 3/4 cup servings to simplify menu planning and food buying in relation to the vegetable and fruit requirement of the Type A lunch.
- Yields of whole vegetables and fruits (raw or cooked) given in parentheses to describe the serving.
- Yield information on canned and frozen juices.
- Yield information on canned soups that contain at least 1/4 cup vegetable per cup of soup.

Serving of Cooked Vegetables and Fruits:

- A serving of cooked vegetable is drained vegetable as usually served.
- A serving of cooked fruit consists of fruit and juice even where the serving is described as "cooked."
- A serving of thawed frozen fruit is fruit and the juice that accumulated during thawing.
- A serving of fruit may include "sugar added" when the fruit was cooked. Enough sugar was added to some fresh, dehydrated, or frozen fruits to serve as sweetened fruit.

Yields of vegetables and fruits vary in the number of servings per purchase unit, according to the form of food used. For example:

- Frozen vegetables usually yield more servings per pound than fresh vegetables since the frozen products are already prepared for cooking and serving.
- Net weight of contents of the can is given under the can size in column 2. Volume and weight of drained fruit or vegetable for the No. 10 can are usually given in column 6.
- Tomato paste, tomato purée, and tomato sauce yields were determined by volume of the concentrated mixture as well as by volume of reconstituted juice.
- Dehydrated vegetables and fruits yield more servings per pound than fresh, frozen, or canned because they gain weight and volume as they absorb water during soaking and cooking. Some dehydrated products, particularly fruits, continue to expand while cooling.

Dehydrated Vegetables and Fruits in Column 1 Include:

- Low moisture—dehydrated to 2-1/2 to 5 percent moisture content.
- Regular moisture—dried to 18 to 25 percent moisture content.

Pound of Canned Food—the number of 1/2 cup servings per pound of product is based on the net weight (food and liquid) of the No. 10 can.

VEGETABLES, FRUITS

Food as purchased (1)	Purchase unit (2)	Servings per purchase unit (3)	Serving size or portion (4)	Purchase units for 100 servings (5)	Additional yield information (6)
APPLES Fresh	Pound	4.00	1 small raw apple (about 1/2 cup)	25.00	1 lb AP=0.76 lb ready-to-cook or serve raw.

OTHER FOODS

The foods in this section are used in many ways in Type A lunches. Although these foods are not specified in the Type A pattern, they are customarily used to help round out the lunch, improve acceptability, and satisfy children's appetites.

Many of these foods supply extra calories which help to meet the energy needs of growing boys and girls. Some of these foods also contribute varying amounts of nutrients such as protein, vitamins, and minerals essential for good nutrition. Thus, OTHER FOODS help to meet the nutritional goal of the Type A lunch which will make a significant contribution toward the daily dietary allowances recommended by the National Research Council for 10- to 12-year-old boys and girls.

The cornmeal, rice, and white flour donated to schools under the National School Lunch Act are enriched with vitamins and minerals in compliance with the regulations promulgated under the Federal Food, Drug, and Cosmetic Act. When these foods and other cereal products such as macaroni, noodles, and spaghetti are purchased by schools, they should be in the enriched form so they will contribute additional vitamins and minerals essential for good nutrition.

Dry vegetables that are used for seasoning are included in this section. The number of cups of dry vegetable in a pound or another purchase unit is shown. The amounts to use for flavoring in place of the fresh product are given in column 6.

Foods other than those listed in this section are often used in Type A lunches. Primarily, the foods included are those for which yield information is needed in planning and preparing lunches.

Special Purchase and Market Pack in Column 1 Are Defined As:

- Special purchase—applies only to USDA-donated foods not normally available on the market.
- Market pack—refers to foods that are available on the market.
